3M Pharmaceuticals

St. Paul, MN 55144
(800) 364-3577
(651) 736-2610
pharma@mmm.com
www.3m.com/pharma

3M Pharmaceuticals specializes in aerosol respiratory medicine, particularly in the development of metered dose inhalers (MDIs) for treating asthma. 3M pioneered and introduced the portable MDI in the 1950s and introduced the first breath-actuated inhalers in 1993. 3M launched the first CFC-free inhalers without ozone-depleting propellants. More than half of all the inhalers in the world today use 3M components.

marketing@i-stat.com
www.i-stat.com

i-STAT develops, manufactures, and markets diagnostic products for blood analysis that provide health care professionals critical diagnostics information accurately and immediately at the point of patient care. i-STAT is a division of Abbott Laboratories.

The Patient's Voice

**Just the Right Thing:
Mike Martinez, RRT,
Billings, MT**

"I'm 69 years old and currently work as a manager at an auto repair shop. I was recently diagnosed with obstructive sleep apnea, and it took me a little time to get used to CPAP therapy. My respiratory therapist, Mike Martinez, was pretty sharp. Mike knew exactly what I needed, and now I sleep with my CPAP every single night. My wife likes it too, because I don't keep her up with my snoring. She even checks on me once in a while now because I sleep so quietly. In fact, I feel good enough now to go to the athletic club, and I've been just amazed at how many people there are using CPAP, too."

*– Richard Strausburg,
Billings, MT*

AccuTest

P.O. Box 999
Westford, MA 01886

The Airsonett AirShower® is an assistive product for persons with moderate to severe allergic asthma. Proven in Sweden, the device is based on the principle of non-turbulent displacement and controlled thermal stratification. Clean room air is delivered within 3 minutes after unit begins operating with a guaranteed particle count of fewer than 5,000 particles larger than 0.3 microns/cubic foot. The AirShower provides a noticeable anti-inflammatory effect by reducing the content of irritating particles and allergens in the breathing zone. Best results have been achieved at night when an individual's immune defense has had time to rest and recover for a better night's sleep and better quality of life.

ARC Medical, Inc.

ThermoFlo™ System for ICU Humidification (HCH) provides therapeutic levels of humidification. ThermoFlo™ Filter "S" provides a compartment on the patient side to reduce significantly any increase in resistance due to secretions from patient or lavaging solution (meets minimum standards for humidification, AARC CPG). ThermoFlo Filter Midi provides high performance in a smaller package for patients on lung protective strategy ventilation. SLIPATM™ is a cuffless supralaryngeal airway with high initial success in insertion. Body design allows for protection from aspiration. See us on the Web at www.slipa.com and www.arcmedical.com.

Bedfont manufactures and distributes the piCO+ and the EC50 Micro carbon monoxide monitors, the personal Smokerlyzer Stop Smoking System, and the CoMPact Smokerlyzer, all essential tools for your smoking-cessation program. We also carry the EC50-ToxCO+ (which screens for carbon

monoxide poisoning) and our new Gastrolyzer 2 hydrogen monitor. Our monitors are high-quality systems for use by smoking-cessation programs, hospitals, physicians, ERs, paramedics, and major pharmaceutical and medical research companies. Bedfont also carries the COData+ software program. This software, which currently works with the piCO+ monitor only, is a patient database program that allows you to print, graph, and track your patients.

Beevers Mfg & Supply Inc.

14670 Baker Creek Rd.
McMinnville, OR 97128
(800) 818-4025
(503) 472-9055
(503) 434-6303 Fax
info@beevers.net
www.beevers.net

Established in 1987, Beevers Manufacturing designs and produces products to increase the effectiveness and safety of neonatal and pediatric respiratory therapy. The Cannulaide helps maintain a consistent and non-irritating pressure seal during CPAP therapy. Sticky Whiskers allows a cannula (or OG/NG tube) to be secure yet easily repositioned. The Tilson Trach Guard prevents accidental external occlusion of the pediatric trach patient, when even a chubby chin can be a hazard. It has a low profile, fits like a 15 mm adapter, and can easily be suctioned. It is considered standard equipment in many pediatric units. Call for free samples.

Cardiac Science focuses exclusively on noninvasive ways to manage heart disease. It's been our life's work for almost a century. Health care practitioners worldwide have relied on the Burdick, HeartCentrix, Powerheart, and Quinton brands for decades. We invented the modern stress test, the single channel ECG, and the first fully automatic bedside defibrillator. Today, we design all our equipment with connectivity in mind, to integrate with hospital information (HIS), electronic medical record (EMR), and other systems. Cardiac Science, At the Heart of Saving Lives.

Discovery Labs is a biotechnology company developing our proprietary surfactant technology as surfactant replacement therapies (SRT) for respiratory diseases. Our technology produces a precision-engineered surfactant that is designed to mimic the essential properties of natural human lung surfactant and potentially address respiratory diseases that have no approved therapies available. In the pipeline are Surfaxin® for RDS and BPD in premature infants, and Aerosurf™ for neonatal respiratory failures. SRT technology is also being developed to address the various respiratory conditions affecting pediatric, young adult, and adult patients suffering from ARDS, ALI, and COPD.

Dixtal Medical™, a subsidiary of Dixtal Biomedica in Brazil, manufactures pulse oximetry monitors and Novametrix™ reusable pulse oximetry sensors. Dixtal-Novametrix™ high performance pulse oximetry uses cost-effective reusable sensors. When the tape wears out, the tape is replaced, not the sensor. Dixtal Medical provides participating hospitals with "Sensor Management Plans." This process guarantees them significant cost savings, while using a product of the highest quality and performance. Some participating hospitals, over a 10–12 year period, have saved \$15–20 million. Dixtal Medical is currently establishing an engineering, manufacturing, and marketing base in the U.S. For more information, call (877) 434-9825.

ELECTROMED, INC.

Creating superior care through innovation®

Electromed Inc. is the innovative leader in the development, manufacture, and worldwide sales of the SmartVest® Airway Clearance System®. This system is a patented medical device that uses a technology called High Frequency Chest Wall Oscillation (HFCWO) to provide Chest Physio-Therapy (CPT). HFCWO helps the patient to clear the lungs of excess mucus and also provides improved lung drainage. Electromed, Inc., as the first to provide a portable, then programmable, and now multi-positional operating system, takes pride in claiming its place as the "Innovative Leader in HFCWO

Therapy." It is growing rapidly consistent with its commitment to "Providing Superior Care through Innovation."

Hamilton Medical pioneered the concept of Intelligent Ventilation, which is about patient safety, clinical quality improvement, and error reduction with the goal to eliminate patient harm due to mechanical ventilation. The four key elements of Intelligent Ventilation are: ASV, the only "ventilation autopilot" offered anywhere; PV Tools, automated and hassle free determination of best PEEP and lung recruitment; Human Factors Training, error reduction using techniques proven effective in commercial aviation; and The Ventilation Cockpit, one picture is worth a thousand numbers (Ventilation Situational Awareness). The implementation of the Intelligent Ventilation concept has confirmed patient safety and quality outcomes.

Heart Hugger, manufactured by General Cardiac Technology, is a sternum-support harness that provides patient-controlled pain management after thoracic surgery. Throughout recovery, Heart Hugger helps to give patients the confidence and

willingness to do their deep breathing and coughing exercises needed to speed recovery. Whenever patients need to cough, breathe deeply, sneeze, or make uncomfortable movements, they take the handles in one or both hands and squeeze, holding the ribcage together with uniform encircling pressure, stabilizing their sternum while providing pain relief. Heart Hugger is used by more than 200 leading heart hospitals in the U.S. and over 340 heart programs worldwide.

Thank you for your interest in OxyView™. In retrospect, all other flow meters in the market are usually attached at the tank and can only work in the vertical position as they are dependent on gravity. All of the gravity-dependent flow meters are only accurate within +/-20%, which is a huge error margin. It is also inconvenient for the patient since they must keep the tank within vision to check any gauge or flow rate. If the tank is tilted, even slightly, the gravity-dependent flow meter becomes even more inaccurate and sometimes doesn't work at all due to friction. The OxyView™ is a high-quality product that is accurate within +/-3% and is not gravity dependent. It can be placed “in-line” anywhere on the tubing.

ISIS Medical Solutions, LLC, is a medical equipment dealer. We wholesale pre-owned critical care equipment. Our focus is in respiratory therapy, infusion therapy, and sequential compression devices. We constantly source from hospitals, home health care facilities, and alternate care facilities throughout the United States to make these acquisitions. We are in the market to purchase hundreds of varieties of infusion pumps, sequential compression devices, pulse oximeters, and ventilators. You can count on ISIS Medical Solutions for

prompt response time, fair market value rates, and free referrals. If you have any questions or would like more information on ISIS Medical Solutions, visit our web site.

Jones Medical Instrument Company

200 Windsor Dr.
Oak Brook, IL 60523

info@jonesmedical.com
www.jonesmedical.com

With 87 years of spirometry design and manufacturing experience, Jones Medical has established itself as a leader in the spirometry field. Our most popular product utilizes a cordless 1-pound spirometer for optimum flexibility. A disposable sensor minimizes the need to sterilize hoses, recalibrate pneumotachs, or buy expensive bacterial filters. We also offer the only spirometric calibration syringe that can check your equipment's flow and volume accuracy. For the highest quality spirometry equipment, the widest selection calibration devices, and related accessories, respiratory specialists have relied on Jones products for years.

Masimo, the inventor of Masimo SET Measure-Through-Motion-and-Low-Perfusion pulse oximetry and Masimo Rainbow SET Pulse CO-Oximetry, develops innovative monitoring technologies that significantly improve patient care. Independent and objective studies demonstrate Masimo provides the most reliable SpO₂ and pulse rate measurements through motion and low perfusion. Masimo Rainbow

SET continuously and noninvasively measures hemoglobin (SpHb) and oxygen content (SpOC) — both pending FDA clearance — carboxyhemoglobin (SpCO), methemoglobin (SpMet), as well as oxyhemoglobin, pulse rate, and perfusion index, allowing early detection and treatment of potentially life-threatening conditions. Rainbow SET also features PVI to assess fluid responsiveness.

Meditel Ingeniería Médica is a Spanish company based in Zaragoza. We design and commercialize medical equipment under the Bitmed brand. Founded in 1996, since then we have managed to be trusted by the most important professionals of our sector in Spain, as well as in other countries where our products are commercialized. Meditel is part of SibelGroup, a Spanish group of manufacturers. These companies, without losing their own identity, work in close collaboration to manufacture and commercialize their products with one aim, that is, to offer their respective clients a wider range of quality products manufactured in Spain, as well as improved service.

Meridian Healthcare Group was founded on a commitment to excellence and teamwork that permeates through the entire organization. Meridian has been "Shaping the Future of Respiratory Care" for over 4 decades. As one of the largest providers of respiratory care in the United States, Meridian has built a national network of clinical programs in hospitals, skilled nursing facilities, outpatient clinics, homecare centers, sleep labs, and respiratory pharmacies. Meridian's primary focus is to provide innovative products and services for the care of patients with pulmonary disease. You can depend on Meridian's regional and clinical directors for technical support after the sale. Meridian is your partner, not just another vendor.

mii@michiganinstruments.com
www.michiganinstruments.com

Michigan Instruments provides a valuable tool — the TTL® Training & Test Lungs and PneuView® software — to the respiratory care industry, ensuring patient safety through simulation of actual human lungs. The system provides a broad spectrum of benefits, ranging from ventilator manufacturers validating the safety of their products; to therapists learning the ever-increasing complexities of ventilator operations; to biomedical engineers troubleshooting, resolving, and documenting difficult-to-recreate ventilator performance issues. The key to its long history of success is its ability to reduce patient risk by realistically duplicating clinical conditions in a non-clinical setting.

nelson@nlhep.org
www.nlhep.org

NLHEP® has 2 goals: to increase awareness of COPD within the community, and to encourage primary care providers to use simple spirometry to diagnose and treat COPD. The Spirometer Review Process and the COPD Awareness Poster Project, along with patient, family, and professional educational materials, help to meet the NLHEP goals. It is estimated that up to 50% of those with COPD do not know they have the disease, even though they may be symptomatic. The motto of the NLHEP is "Test Your Lungs. Know Your Numbers®." Everyone should know their lung function numbers just like they know their cholesterol and blood pressure numbers. Visit our web site for information on the NLHEP and our COPD initiatives.

Pall Corporation is a \$2 billion worldwide leader in filtration for medical and industrial applications. The Pall Medical Division provides breathing circuits, filters, and masks for respiratory care and pulmonary function testing. The Ultipor 100 filter has a high efficiency pleated hydrophobic membrane that heats and humidifies ventilation gases for respiratory patients. It has a maximum use life of 48 hours and retains 99.999% of airborne bacteria and viruses and 100% of

liquidborne microorganisms. The BB50T machine-end filter protects patients and ventilators from bacterial/viral contamination (99.999% removal efficiency). The PF30 filter acts as a barrier to bacterial and viral contamination during PFTs.

Respiroics Respiratory Drug Delivery (RDD) is Respiroics' source of aerosol delivery technology solutions for patients, physicians, and pharma/biotech partners. We offer delivery devices that are tailored to a drug's use in the real world rather than just the laboratory. Our devices are designed to address patient needs and lifestyle as well as drug characteristics. Our high level of expertise, advanced research and technologies, and combination of skills help to make respiratory drugs more effective, safer, and easier to use — delivering better aerosol treatments for patients, better tools to their physicians, and

a better regulatory outlook to pharmaceutical and biotechnology industry partners.

Sage Products brings a comprehensive approach to oral care, based on cleaning, debriding, suctioning, and moisturizing the entire oral cavity. By removing dental plaque, debris, and oral secretions, Sage's unique cleansing and suctioning products address three known risk factors for ventilator-associated pneumonia: bacterial colonization of the oropharyngeal area, aspiration of subglottic secretions, and colonization of dental plaque with respiratory pathogens. By developing innovative products and promoting education, Sage helps health care facilities improve their overall quality of care.

Smooth-Bor Plastics is the innovator of smooth bore corrugated tubing, manufacturing quality products for more than 30 years to fit a wide variety of applications in the medical field, featuring both disposable and reusable styles. The most popular applications are on respirators, ventilators, humidifiers, spirometers, and CPAP. The smooth interior promotes laminar flow and is designed so that even a sharp bend will not cut off air flow. Our products have been tested to meet USP Class 5 and ISO standards for cytotoxicity and biocompatibility.

Vascular Technology (VTI), a world leader in the manufacturing of oxygen sensors, both polarographic and galvanic, manufactures an oxygen analyzer for use in instances where oxygen-level alarms are not necessary. It is well suited for "spot checks" in the hospital or home care setting. This unit offers the same state-of-the-art integrated circuitry and membrane switch technology that you find employed in our oxygen analyzer/monitor. Together, these products are capable of filling all of your oxygen monitoring needs.

imagination at work

VersaMed is now a part of the GE Healthcare family of companies. Their iVent201 ventilator is the most versatile ICU class ventilator on the market. In VersaMed's continuing commitment to providing cutting-edge products to be used throughout the spectrum of care, we created the first full-featured, transportable, MRI compatible, critical care grade, invasive and noninvasive ventilator available. With the advanced features of the Vent201, your patient will be

comfortable throughout the trip from the ICU to the MRI suite or anywhere they need to go... even home! With its competitive price and unlimited upgradeability, the iVent201 is the savviest investment for all you need.

Wolfe Tory Medical manufactures and markets mucosal atomization devices (MAD) used to atomize topical anesthetics and other medications across nasal and

oropharyngeal mucous membranes. The MAD Nasal device is specifically designed for intranasal drug delivery, while the MADgic device is suited for topicalizing the airway prior to intubation, endoscopy, bronchoscopy, and TEE procedures. All MAD devices atomize medications in a fine mist, giving thorough coverage and optimal absorption across mucous membranes for fast onset of action.
